URECAMatch - Submission Index

SC2006 Software Engineering | SCEF Group 4

Team: Ian Tan, Robin Teoh, Nicholas Ng, Edwin Tan Qi Lun, Benjamin Ng.

Repository: https://github.com/softwarelab3/2006-SCEF-A4

Final submission

The Lab 5 requirements and design documents are stored in this folder. They are linked here alongside the implementation, tests and demo video.

Deliverable	Location
Software Requirements Specification, including the Use Case Model	Final SRS
Use Case descriptions	Final Use Case descriptions
Key classes and relationships	Final class diagram
UI state machine / dialog map	Final dialog map
Source code	Application repository folder
API test cases	API tests
Web end-to-end test cases	Web tests
Test design and recorded results	Test Cases and Testing Results
Demo video	Watch the URECAMatch demo
Meeting minutes and coordination record	Retrospective team coordination summary

Implementation folders

Component	Location
Web application	Web source
API application	API source
Database schema and seed files	Database files
API contract	Shared API files

Document and code links open the main branch of the team GitHub repository. The demo video opens on YouTube.

Supporting materials

Material	Location
System architecture	System architecture diagram
Boundary diagram	Boundary diagram
Requirements, implementation and test mapping	Traceability table
Application setup	Setup guide
Development workflow	Contributing guide
Demo script	Demo script
Presentation slides	Live demo slides

Previous lab submissions

These links preserve the earlier submissions. The final documents are listed above.

Lab 1 - Requirements elicitation

Material	Location
Lab 1 deliverables report	Deliverables report
AI critique report	AI critique

Lab 2 - Requirements analysis

Material	Location
SRS	Lab 2 SRS
Use Case descriptions	Lab 2 Use Cases
Conceptual class diagram	Class diagram
Boundary and control model	Class boundary diagram
Initial UI state machine	Initial dialog map
AI technology-stack report	AI report

Lab 3 - Design and implementation

Material	Location
SRS	Lab 3 SRS
Use Case descriptions	Lab 3 Use Case descriptions
Design class diagram	Full-size class diagram
UI state machine	Full-size dialog map
Boundary diagram	Full-size boundary diagram
System architecture	Full-size system architecture
AI project-initialisation report	Supplementary AI report
Original AI-generated skeleton	Skeleton before team adjustments
Team-adjusted application skeleton	Skeleton after manual team adjustments

Lab 4 - Implementation, testing and demo preparation

Material	Location
Lab 4 documents and diagrams	Lab 4 folder
Coding-agent exercise reflections	Section 3.3.4 AI report

The test report, demo script and slides are linked in the sections above.

Individual peer review

Each team member completes their own peer-review survey through the course's announced submission channel. Individual evaluations are submitted separately.
